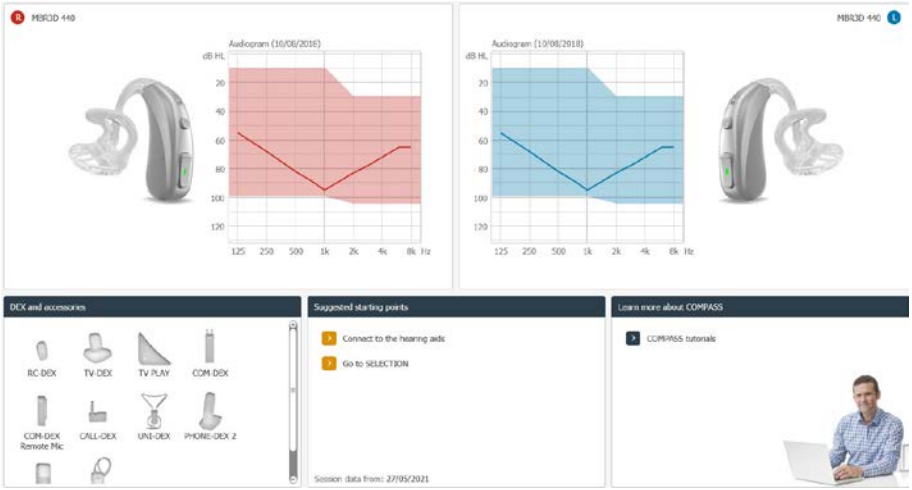
QUICK GUIDE

COMPASS GPS

SESSION START

Introduction

Whenever you open COMPASS, the program starts by showing the SESSION START overview window. This is the front page of the COMPASS program.



Detect hearing aids

- First-time visit: When you select the *Connect* button, the Detect hearing aids dialogue box opens. When the hearing aids are connected, you are sent to the FITTING overview.

- Follow-up visit: When you select the *Connect* button, the Detect hearing aids dialogue box opens. When the hearing aids are connected, you are sent to the SESSION START overview. Now the SESSION START overview is updated with relevant information about the client's hearing aids.

Basic information about SESSION START

The SESSION START window gives you an overview of the types of hardware used in the current fitting, and basic information about the client. The SESSION START window serves several purposes:

- Provides an overview
- Shows what has happened since the client's last fitting/visit
- Gives access to relevant functions before you activate Connect

- Helps new users of COMPASS understand how the program works
- Gives the dispenser more flexibility

Panes

Below the audiogram area you find a row of panes. The *DEX and accessories* pane and the *Learn more about COMPASS* pane are always present, and, depending on whether the hearing aids are connected, the *Suggested starting points* or *New hearing aid data* pane is also displayed.

- DEX and accessories
  You can see available devices in this pane if you have connected to the hearing aids. Note that you cannot match an available DEX device by selecting it in this pane. However, you can click a DEX icon to open the DEX matching window. If a small green arrow is shown next to the DEX device, this device is matched to the hearing aids.

- Suggested starting points
  This pane is displayed if you have chosen a new client, and if it is a first-time visit – this also goes for a follow-up visit, but the content of the pane might be changed. The pane allows you to connect to the hearing aids or go to the SELECTION window.

- New hearing aid data
  This pane shows the data that has changed since the last time the hearing aids were connected to COMPASS. This gives you a brief overview of what has happened since the last session. If automatic adaptation has changed, you can see the adaptation level by means of the icon below the text in this pane (unless the feature has reached level four).

  You can access some of the features by clicking the text. This leads you directly to the window containing the selected feature.

- Learn more about COMPASS
  In this pane you can select COMPASS Tutorials to open the tutorials on the Widex Internet site. Note that items under this pane open in an Internet browser – you have to be connected to the Internet in order to open them.

SESSION START tools

You have access to a number of tools from the SESSION START window:

- **Firmware update** allows you to install any available update in your hearing aids and other devices. Note that this feature is not available for all hearing aids.

- **Transfer settings** allows you to copy the settings from one hearing aid to another. Note that this feature is not available for all hearing aids.

- **Quality assurance** allows you to check the hearing aid hardware and to perform tests with the hearing aid in a test box.

- **Client privacy** gives you access to the Research and development consent and the Privacy notice. In this window you can consent, or withdraw consent, on behalf of your client.

- **COMPASS setup** allows you to change the general setup of the COMPASS GPS program. For instance, you can change language, or change your default graphics view.

For further information and guidance, open the Help system from the top navigation bar in the COMPASS program, or by pressing the F1 button on your keyboard.
