QUICK GUIDE

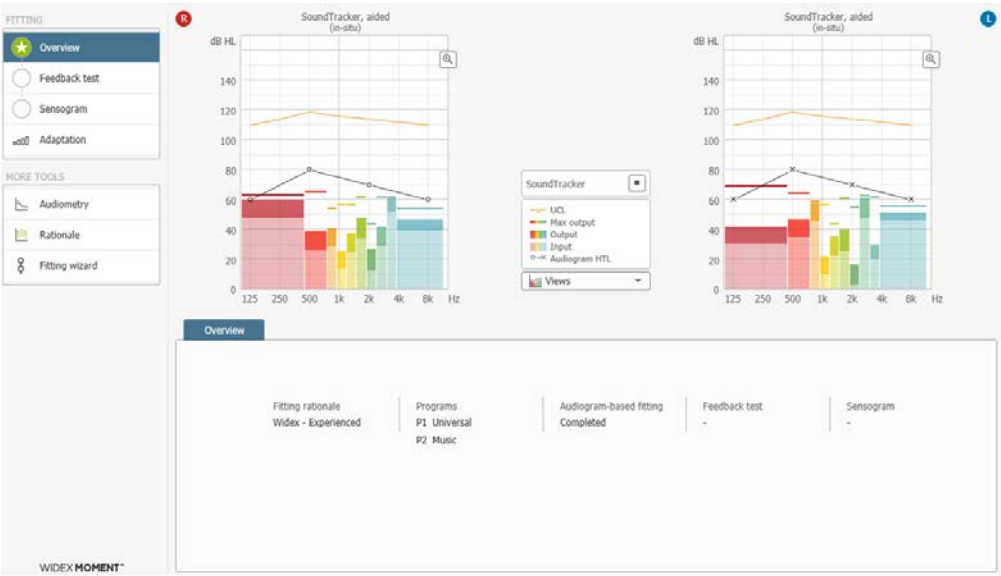
COMPASS GPS

FITTING

Introduction

This quick guide explains the FITTING theme in COMPASS.

From the left navigation bar in the FITTING theme you can access the Feedback test, the Sensogram and Adaptation, as well as the tools Audiometry, Rationale and the Fitting wizard.



Fitting overview

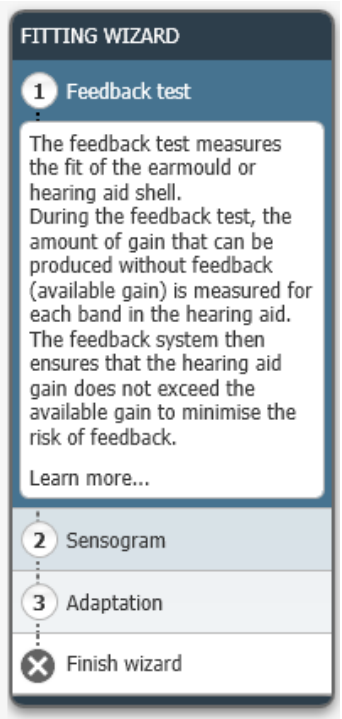
The Fitting overview window is the starting page in the FITTING theme, and it gives you an overview of the status of your fitting. This window informs you that a fitting based on an audiogram alone is sufficient, but that COMPASS advises you to make a better and more precise fitting by means of in-situ measurements, such as a Feedback test and a Sensogram.

You can choose between different graphics views in this window as well as the specific settings for the selected view. Select the *Views* drop-down list between the graphics representations. This opens a list of several possibilities that allow you to choose between real-time and spectral performance, output, gain and SoundTracker settings.

In the Fitting status pane in the middle of the window, you can see basic information about the fitting. The layout of this section of the screen depends on the selected hearing aids, but, in general, you get a status on the audiogram-based fitting, and you can see whether a Feedback test and a Sensogram have been made.

Fitting wizard

For all hearing aid series, except MOMENT, you can open the Fitting wizard from the left navigation bar under the FITTING theme. The Fitting wizard is a workflow in which you are guided through a feedback test, Sensogram and Adaptation in order for you to obtain the best possible fitting recommended by WIDEX. All three features in the wizard are optional, and you can leave the wizard at any time.



The Fitting wizard starts with step 1, the feedback test. When you open the fitting wizard, the left navigation bar changes to reflect the steps in the wizard. When you are finished, select *Finish wizard*. All adjustments are saved, and you return to the Fitting overview window, which is now updated with the actions you have taken during the Fitting wizard.

For further information and guidance, open the Help system from the top navigation bar in the COMPASS program, or by pressing the F1 button on your keyboard.
